Nov 25, 2001 this sequence version replaced gi:3204432.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em.; EMBL; Sw.; SWISSPROT; Tr.; TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at their source databases:

on the WORMPEP database can be found at the content of the covered by high quality data (i.e., pired quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by thigh quality data (i.e., pired quality >= 30); and attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by the sassembly was confirmed by the sanger confirmed by the sanger confirmed by the sanger contings of human chromosome 22 mapping Group.

Futher information can be found at the sequence of the confirence of the

The invention relates to sequence determination oligonucleotides for detecting polymorphic sites in a 5' flanking region of cytochrome P450 26 (CYP2D6) gene. CYP2D6 enzymes are involved in the metabolism of many different xenobiotics. Human CYP2D6 gene is located on chromosome 22. The oligonucleotides may be used as in situ hybridisation probes, in ligase-based sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, as hybridisation-based diagnostic assays, and as components of diagnostic microarray. CYP2D6 is useful to predict variations in an individual's ability to metabolise certain drugs. The present sequence is human CYP2D6 gene 5' flanking region containing polymorphic sites.
                                                                                                                                                                                                                                                                                                                                                             for detecting
                                                                                                                                                                                                                                                                                                                                                      New sequence determination oligonucleotides, useful for detection polymorphic sites in a 5' flanking region of a CYP2D6 gene, a hybridization probes, as components of diagnostic assays, or ligase-based sequence determination
                                                                                                                                                                                                                                                                                           Oliasson

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to sequence determination oligonucleotides for detecting polymorphic sites in a 5' flanking region of cytochrome P450 2D6 (CYED56) gene. CYED56 enzymes are involved in the metabolism of many different xenoblotics. Human CYED56 gene is located on chromosome 22. The oligonucleotides may be used as in situ hybridisation probes, in sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, as hybridisation-based diagnostic assays, and as components of diagnostic microarray. CYP2D6 is useful to predict variations in an individual's application metabolise certain drugs. The present sequence is human
                                                                                                                                                                                                                                                                                         Human; cytochrome P450 2D6; CYP2D6; enzyme; detection; xenoblotic;

of hybridizing to CYP2D6 promoter useful for therapies using substrates of cytochrome P-450 A polynucleotide capable the optimization of drug

-; 41pp; English. Claim 1(a); Page

The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene, which includes G at position 36 (base -1584 according to the Human Cytochrome P450 Allele Nomenclature). The presence of C at position -1584 bp is a marker for low enzyme activity, whereas there is strong association of G single nuclectide polymorphism occurs in approximately 20% of the population. The invention provides a method of diagnosing a disorder related to reduced or enhanced capacity for clearance of CYP2D6 substrates (antiarrhythmic, beta-adenergic receptor antiagonist, tricyclic antidepressant, selective serotonin reuptake inhibitor, neuroleptic, opiate, cytostatic or amphetamine), or susceptibility to such a disorder. The novel variant forms of the CYP2D6 gene provided by the invention provide the potential for the development of a pharmacodynamic profile of drugs for a given crypto gene, and diagnostic tests for the discrimination of different alleles in human individuals, provide a very potent tool of the CYP2D6 gene production, and whose metabolism is therefore dependent on CYP2D6 activity.

Cof the CYP2D6 gene production, and whose metabolism is therefore dependent on CYP2D6 activity, and whose metabolism is therefore cerising a name of metabolism is therefore cerising a name of metabolism is therefore risting and from the CYP2D6 promoter sequence given in the Sequence is a stain and a name of the control of the cypach activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

CC MRP (NM_004996, NM_019900, NM_019901, NM_019902, NM_019898, NM_019899) and their complementary sequences, or a sequence (S1) chosen from 87 sequences and their complements. The chemical pretreatment c is bisulphite treatment to convert cytosines (but not methyl-cytosines) collygonoucleotide or a peptide nucleic acid (PMA)-oilgomer, comprising in each case at least one base sequence having a length of 9 nucleotides which hybridises to or is identical to a chemically pretreated bNA of can array for analysing diseases associated with the methylation state (CG) and/or detecting SNPs (single nucleotide polymorphisms) cc of the 87 sequences. The oilgomers may also be used as PCR primers. The set of 87 nucleic acids and their complements is useful for diagnosis and therapy of solid tumours and cancer. The present sequence control of the printed specification, but was obtained in electronic cof the printed specification, but was obtained in electronic cofficial directly from MPO at

```
The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alzheimer's disease, Alzheimer's disease, and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2050
